Revite[®]

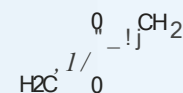

**The Most Advanced Mono-phasic
Pure Hyaluronic Acid Filler
With Superior Viscosity and Cohesiveness**

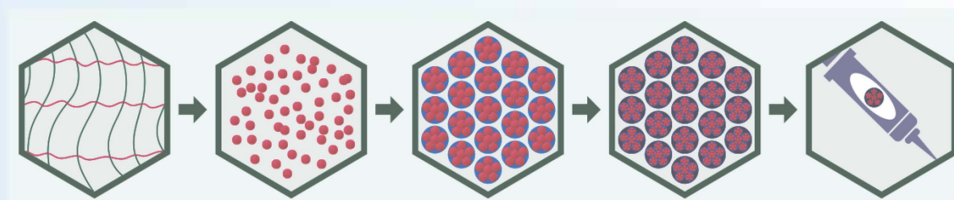

Design your confidence

The Technology of Revite

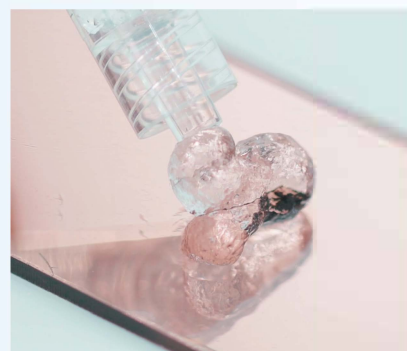

Revite is powered by
3 Stages Micro Bead Cross-linking Technology with DVS,
 which makes
more compact and complete cross-linking.

Divinyl Sulfone
 not BODE

**Superior Viscosity,
 Cohesiveness
 and
 Long Duration**

Multi-degree Amphiphilic Purification Wash-out Technology
 leaves no residual cross-linking agent.

"No cross-linking agent is remained"
 *KTR (Korea Testing and Research Institute,
 government-approved testing agency)

Complete cross-linking of Revite

Pendent type cross-linking is likely to cause
 delayed inflammation

Benefit of Revite

**Superior viscosity and cohesiveness
 with excellent plasticity**

Optimized long duration :
 Maximized HA cross-linking efficacy due
 to DVS as a cross linking agent

Proven safety:

No adverse effect associated
 with residual cross-linking agent and
 pendent type cross-linking
